

# Training TriflexAIR system

Two-day installation training

VK-140-200311

## TriflexAIR system

TriflexAIR is a fully integrated wheelchair restraint system suitable for many minibuses. TriflexAIR is a certified system that meets all European regulations and has been approved by the major brands. The installation of the TriflexAIR system is different for each. To make certified adjustments to the vehicle you, as a dealer, need to complete the Tribus TriflexAIR conversion training.

## Training program

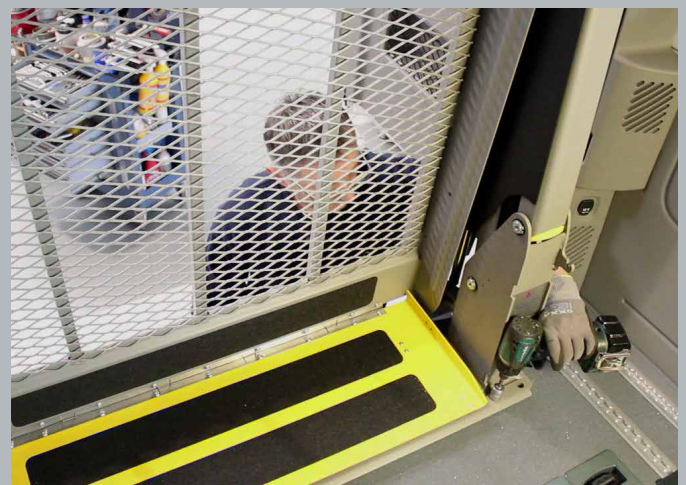

The two-day training program is especially designed for workshop fitters that are going to convert minibuses into wheelchair accessible vehicles using the TriflexAIR system. The program contains the full installation of the TriflexAIR flooring and seating system. Our trainers are certified experts. After completion of the training all participants receive a personal official certificate.

If all requirements are met, you can install the TriflexAIR system in all minibuses at your own workshop without losing OEM warranty.

## The 7 training steps

1. DISASSEMBLY
2. PREPARING FLOOR AND VEHICLE
3. MOUNTING FLOOR
4. MOUNTING THREE-POINT BELT RECEIVER
5. ELECTRICAL PREPARATION
6. MOUNTING LOW ENTRY STEPS (OPTIONAL)
7. MOUNTING ENTRY BARS
8. CONVERSION FINISHING
9. INTEGRATING WHEELCHAIR LIFT
10. PLACING SEATS
